

waste management

InfraPlan is able to provide services to government and developers, producing Waste Management plans for a range of projects from single site residential or commercial projects to large-scale, mixed use and high-rise developments and subdivisions.

Our team keeps up to date with current and innovative technologies and apply these with sound knowledge, experience and passion to provide well-balanced and cost effective outcomes for all involved. This is done while ensuring design compliance and adhering to best practise. We work closely with our clients, architects and designers to develop the best solution.

Waste Management Plans combine well with Traffic Impact Analysis as both include the provision of site vehicle access. InfraPlan can deliver both of these services and as such, can provide a very competitive rate.

capabilities

- + Waste Management System selection to specify solutions of appropriate scale for the development.
- + Waste and Recycling volume estimation; assessing the full range of waste streams including general, recyclable, green organic, hard and e-waste and clinical/medical waste streams.
- + Waste Management System design advice, including internal collection, transfer and storage, working with architects to ensure building layouts can accommodate waste requirements.
- + Waste collection system design, including collection vehicle access and vertical clearance assessment, bin presentation space and on-site bin transfer pathway requirements.
- + At-source waste sorting systems to improve recycling rates and reduce general waste production.
- + Waste chute system specification for multi-storey developments.
- + Design in AutoCAD.
- + Assessment/advice to comply with Australian Standards and Guidelines and local council approval requirements.
- + Extensive knowledge of technical guidelines and standards (national and international) relating to waste volume estimation and handling.
- + Familiarity and understanding of the latest innovative waste handling systems from around Australia and the world.

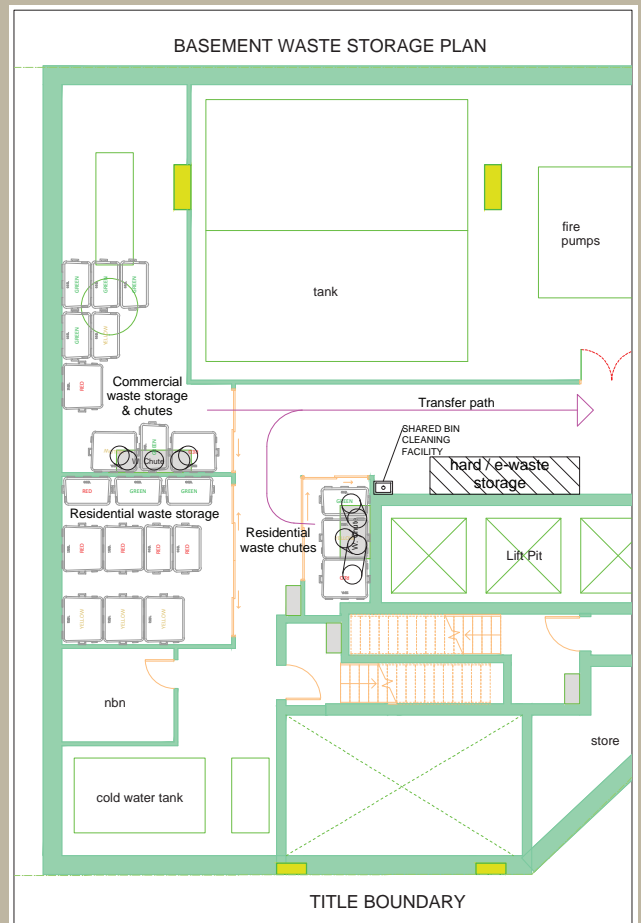

recent projects

- + Mixed use, residential tower – JPE and YHL Investments (2018)
- + South Terrace Clinic – Cambridge Group (2018)
- + Prospect Community Library and Innovation Centre – City of Prospect (2018)
- + Hutt Street mixed use development – Maras Group (2017)
- + Mixed use development including residential aged care and medical services, West Lakes – Uniting SA (2017)
- + Residential infill development, Brighton, Vic – Commercial & General (2017)
- + High density residential developments, West Lakes – Commercial & General (2017)
